

DATALITE

LED TECHNOLOGY

Welcome at DATALITE LED Technology B.V.

Datalite was founded in 1979 in the Netherlands and has ever since taken care of the development, production and sale of electronic displays for the European market.

Datalite is producer and supplier of electronic information displays, mainly based on LED technology. Electric displays are produced in the Netherlands and the mass-production at ES-Datalite in Asia.

Because Datalite manages both development and production Datalite is capable to develop and produce LED displays fast and effectively.

Research and development

Both Datalite locations in the Netherlands and Asia have their own production facilities. The tailor-made displays are developed and produced in the Netherlands, where close cooperating takes place with the customer. When mass production is in sight most of the production takes place at ES-Datalite in Asia.

General

Besides technical recommendation we gladly make a tender, a presentation or a tailored drawing. We offer a complete package. This means that we can provide the electronic LED displays for both inside and outside application, standard or tailor-made, with standard or tailor-made software.

Our products and working methods are much appreciated considering the growing list of clients. For references http://www.datalite.nl/reference_nl.php

When you choose for Datalite, you choose for professionalism, high quality, good support, optimum price/quality and especially flexibility.
